

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER
Monitoring Requirements Not Met for CITY OF POTWIN

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During Fourth Quarter of 2023 we did not monitor for the disinfection by-products of Haloacetic Acids (HAA) and Total Trihalomethanes (TTHM) as required by Kansas Administrative Regulations. Even though this was not an emergency, as our customers you have a right to know what happened and what we did to correct the situation.

What should I do?

You do not need to use an alternative (e.g., bottled) water supply. However, if you have specific health concerns, consult your doctor.

What does this mean?

This is not an immediate risk. If it had been, you would have been notified immediately. *However, some people who drink water containing trihalomethanes and/or haloacetic acids in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.*

What happened?

Samples were taken 5 days late.

What is being done?

Samples have been taken on time.

We anticipate resolving the problem within – problem is resolved.
